### TL497AC, TL497AI, TL497AY SWITCHING VOLTAGE REGULATORS

SLVS009C - JUNE 1976 - REVISED AUGUST 1995

- High Efficiency . . . 60% or Greater
- Output Current . . . 500 mA
- Input Current Limit Protection
- TTL-Compatible Inhibit
- Adjustable Output Voltage
- Input Regulation . . . 0.2% Typ
- Output Regulation . . . 0.4% Typ
- Soft Start-Up Capability

## TL497AC, TL497AI . . . D, N, OR PW PACKAGE (TOP VIEW)

NC - No internal connection

### description

The TL497AC and TL497AI incorporate on a single monolithic chip all the active functions required in the construction of switching voltage regulators. They can also be used as the control element to drive external components for high-power-output applications. The TL497AC and TL497AI were designed for ease of use in step-up, step-down, or voltage inversion applications requiring high efficiency.

The TL497AC and TL497AI are fixed-on-time variable-frequency switching-voltage-regulator control circuits. The switch-on time is programmed by a single external capacitor connected between FREQ CONTROL and GND. This capacitor,  $C_T$ , is charged by an internal constant-current generator to a predetermined threshold. The charging current and the threshold vary proportionally with  $V_{CC}$ . Thus, the switch-on time remains constant over the specified range of input voltage (4.5 V to 12 V). Typical on times for various values of  $C_T$  are as follows:

TIMING CAPACITOR, C <sub>T</sub> (pF)	200	250	350	400	500	750	1000	1500	2000
ON TIME (μs)	19	22	26	32	44	56	80	120	180

The output voltage is controlled by an external resistor ladder network (R1 and R2 in Figures 1, 2, and 3) that provides a feedback voltage to the comparator input. This feedback voltage is compared to the reference voltage of 1.2 V (relative to SUBSTRATE) by the high-gain comparator. When the output voltage decays below the value required to maintain 1.2 V at the comparator input, the comparator enables the oscillator circuit, which charges and discharges  $C_T$  as described above. The internal pass transistor is driven on during the charging of  $C_T$ . The internal transistor may be used directly for switching currents up to 500 mA. Its collector and emitter are uncommitted, and it is current driven to allow operation from the positive supply voltage or ground. An internal Schottky diode matched to the current characteristics of the internal transistor is also available for blocking or commutating purposes. The TL497AC and TL497AI also have on-chip current-limit circuitry that senses the peak currents in the switching regulator and protects the inductor against saturation and the pass transistor against overstress. The current limit is adjustable and is programmed by a single sense resistor,  $R_{CL}$ , connected between  $V_{CC}$  and CUR LIM SENS. The current-limit circuitry is activated when 0.7 V is developed across  $R_{CL}$ . External gating is provided by the INHIBIT input. When the INHIBIT input is high, the output is turned off.

### **AVAILABLE OPTIONS**

ſ		PA	CHIP			
	TA	SURFACE MOUNT (D)	PLASTIC DIP (N)	SHRINK SMALL OUTLINE (PW)	FORM (Y)	
Ī	0°C to 70°C	TL497ACD	TL497ACN	TL497ACPW	TL497AY	
Ī	-40°C to 85°C	TL497AID	TL497AIN	_	_	

<sup>†</sup> BASE (11) and BASE DRIVE (12) are used for device testing only. They are not normally used in circuit applications of the device.

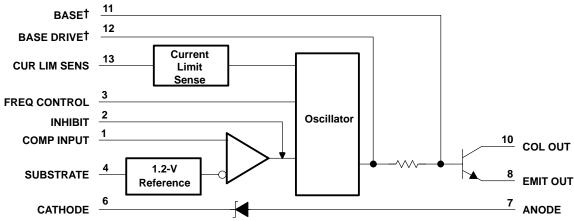

SLVS009C - JUNE 1976 - REVISED AUGUST 1995

### description (continued)

Simplicity of design is a primary feature of the TL497AC and TL497AI. With only six external components (three resistors, two capacitors, and one inductor), the TL497AC and TL497AI operates in numerous voltage conversion applications (step-up, step-down, invert) with as much as 85% of the source power delivered to the load. The TL497AC and TL497AI replace the TL497 in all applications.

The TL497AC is characterized for operation from 0°C to 70°C, and the TL497AI is characterized for operation from –40°C to 85°C.

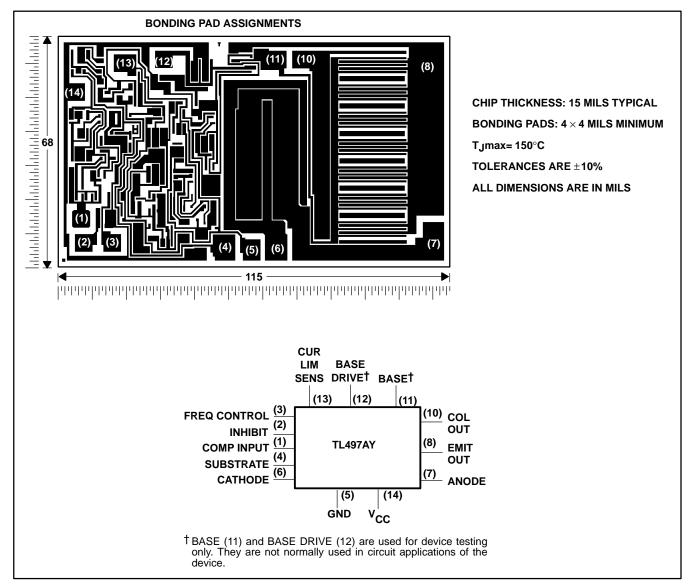

### functional block diagram

† BASE and BASE DRIVE are used for device testing only. They are not normally used in circuit applications of the device.

### **TL497AY** chip information

This chip, when properly assembled, displays characteristics similar to the TL497AC. Thermal compression or ultrasonic bonding may be used on the doped aluminum bonding pads. The chips may be mounted with conductive epoxy or a gold-silicon preform.

## TL497AC, TL497AI, TL497AY SWITCHING VOLTAGE REGULATORS

SLVS009C - JUNE 1976 - REVISED AUGUST 1995

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, V <sub>CC</sub> (see Note 1)	15 V
Output voltage, VO	35 V
Input voltage, V <sub>I</sub> (COMP INPUT)	5 V
Input voltage, V <sub>I</sub> (INHIBIT)	5 V
Diode reverse voltage	35 V
Power switch current	750 mA
Diode forward current	750 mA
Continuous total power dissipation	See Dissipation Rating Table
Operating free-air temperature range, T <sub>A</sub> : TL497AC	0°C to 70°C
TL497AI	40°C to 85°C
Storage temperature range, T <sub>stq</sub>	65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds	

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values except diode voltages are with respect to network ground terminal.

### **DISSIPATION RATING TABLE**

PACKAGE	$T_{\mbox{A}} \le 25^{\circ}\mbox{C}$ POWER RATING	DERATING FACTOR	DERATE ABOVE T <sub>A</sub>	T <sub>A</sub> = 70°C POWER RATING	T <sub>A</sub> = 85°C POWER RATING
D	950 mW	7.6 mW/°C	25°C	608 mW	494 mW
N	1000 mW	9.2 mW/°C	41°C	733 mW	595 mW
PW	700 mW	5.6 mW/°C	25°C	448 mW	_

### recommended operating conditions

			MIN	MAX	UNIT
Supply voltage,	oltage, V <sub>CC</sub> 4.5		12	V	
High-level input voltage, VIH, INHIBIT		2.5		V

#### **IMPORTANT NOTICE**

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
