HMOS SINGLE-COMPONENT 8-BIT MICROCONTROLLER

■ High Performance HMOS II

■ Interval Time/Event Counter

■ Two Single Level Interrupts

■ Single 5-Volt Supply

■ Over 96 Instructions; 90% Single Byte

■ Programmable ROMs Using 21V

■ Easily Expandable Memory and I/O

■ Up to 1.36 μ s Instruction Cycle All Instructions 1 or 2 Cycles

The Intel MCS®-48 family are totally self-sufficient, 8-bit parallel computers fabricated on single silicon chips using Intel's advanced N-channel silicon gate HMOS process.

1

The family contains 27 I/O lines, an 8-bit timer/counter, and on-board oscillator/clock circuits. For systems that require extra capability, the family can be expanded using MCS®-80/MCS®-85 peripherals.

These microcontrollers are available in both masked ROM and ROMless versions as well as a new version, The Programmable ROM. The Programmable ROM provides the user with the capability of a masked ROM while providing the flexibility of a device that can be programmed at the time of requirement and to the desired data. Programmable ROM's allow the user to lower inventory levels while at the same time decreasing delay times and code risks.

These microcomputers are designed to be efficient controllers as well as arithmetic processors. They have extensive bit handling capability as well as facilities for both binary and BCD arithmetic. Efficient use of program memory results from an instruction set consisting of mostly single byte instructions and no instructions over 2 bytes in length.

Device	Internal	Memory	RAM STANDBY
8050AH	4K x 8 ROM	256 x 8 RAM	yes
8049AH	2K x 8 ROM	128 x 8 RAM	yes
8048AH	1K x 8 ROM	64 x 8 RAM	yes
8040AHL	None	256 x 8 RAM	yes
8039AHL	None	128 x 8 RAM	yes
8035AHL	None	64 x 8 RAM	yes
P8749H	2K x 8 Programmable ROM	128 x 8 RAM	no
P8748H	1K x 8 Programmable ROM	64 x 8 RAM	no

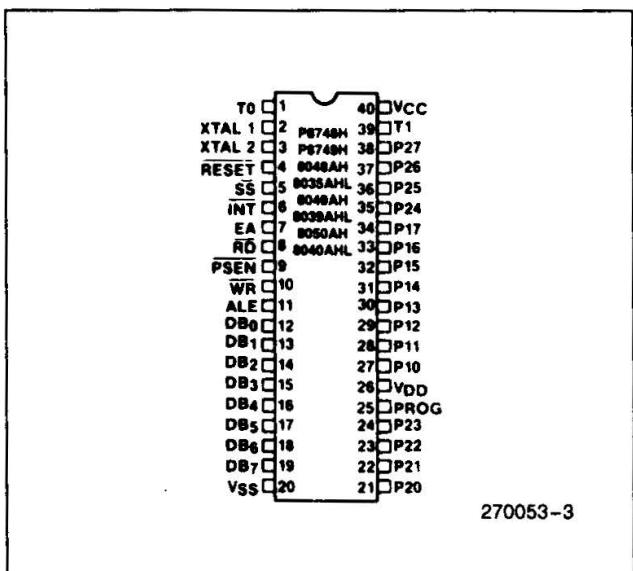

Figure 3. Pin Configuration

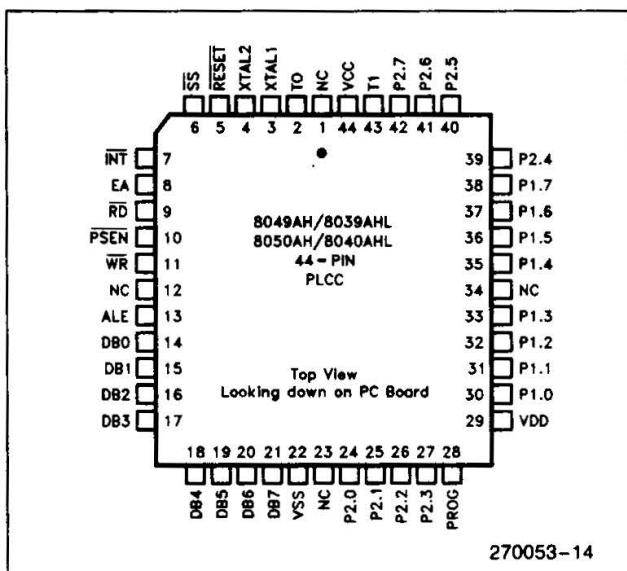

Figure 4. Pad Configuration

Table 1. Pin Description

Symbol	Pin No.	Function	Device
V _{SS}	20	Circuit GND potential.	All
V _{DD}	26	+ 5V during normal operation.	All
		Low power standby pin.	8048AH 8035AHL 8049AH 8039AHL 8050AH 8040AHL
		Programming power supply (+ 21V).	P8748H P8749H
V _{CC}	40	Main power supply; + 5V during operation and programming.	All
PROG	25	Output strobe for 8243 I/O expander.	All
		Program pulse (+ 18V) input pin During Programming.	P8748H P8749H
P10-P17 Port 1	27-34	8-bit quasi-bidirectional port.	All
P20-P23 P24-P27 Port 2	21-24 35-38	8-bit quasi-bidirectional port. P20-P23 contain the four high order program counter bits during an external program memory fetch and serve as a 4-bit I/O expander bus for 8243.	All
DB0-DB7 BUS	12-19	True bidirectional port which can be written or read synchronously using the RD, WR strobes. The port can also be statically latched. Contains the 8 low order program counter bits during an external program memory fetch, and receives the addressed instruction under the control of PSEN. Also contains the address and data during an external RAM data store instruction, under control of ALE, RD, and WR.	All
T0	1	Input pin testable using the conditional transfer instruction JT0 and JNT0. T0 can be designated as a clock output using ENT0 CLK instruction.	All
		Used during programming.	P8748H P8749H

Table 1. Pin Description (Continued)

Symbol	Pin No.	Function	Device
T1	39	Input pin testable using the JT1, and JNT1 instructions. Can be designated the timer/counter input using the STRT CNT instruction.	All
INT	6	Interrupt input. Initiates an interrupt if interrupt is enabled. Interrupt is disabled after a reset. Also testable with conditional jump instruction. (Active low) interrupt must remain low for at least 3 machine cycles for proper operation.	All
RD	8	Output strobe activated during a BUS read. Can be used to enable data onto the bus from an external device. Used as a read strobe to external data memory. (Active low)	All
RESET	4	Input which is used to initialize the processor. (Active low) (Non TTL V _{IH})	All
		Used during power down.	8048AH 8035AHL 8049AH 8039AHL 8050AH 8040AHL
		Used during programming.	P8748H P8749H
		Used during ROM verification.	8048AH P8748H 8049AH P8749H 8050AH
WR	10	Output strobe during a bus write. (Active low) Used as write strobe to external data memory.	All
ALE	11	Address latch enable. This signal occurs once during each cycle and is useful as a clock output. The negative edge of ALE stobes address into external data and program memory.	All
PSEN	9	Program store enable. This output occurs only during a fetch to external program memory. (Active low)	All
SS	5	Single step input can be used in conjunction with ALE to "single step" the processor through each instruction. (Active low) Used in sync mode.	All 8048AH 8035AHL 8049AH 8039AHL 8050AH 8040AHL
EA	7	External access input which forces all program memory fetches to reference external memory. Useful for emulation and debug. (Active high)	All
		Used during (18V) programming.	P8748H P8749H
		Used during ROM verification (12V).	8048AH 8049AH 8050AH
XTAL1	2	One side of crystal input for internal oscillator. Also input for external source. (Non TTL V _{IH})	All
XTAL2	3	Other side of crystal input.	All

t_{CY}	Cycle Time	15t	1.36	15.0	μs	

NOTES:

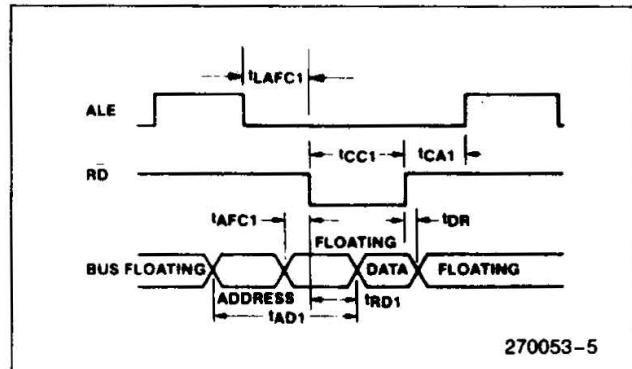

1. Control outputs: $C_L = 80 \text{ pF}$. BUS Outputs: $C_L = 150 \text{ pF}$.
2. BUS High Impedance Load 20 pF
3. f(t) assumes 50% duty cycle on X1, X2. Max clock period is for a 1 MHz crystal input.

WAVEFORMS

INSTRUCTION FETCH FROM PROGRAM MEMORY

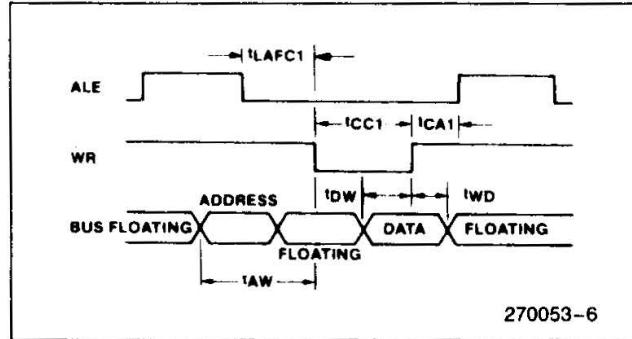

READ FROM EXTERNAL DATA MEMORY

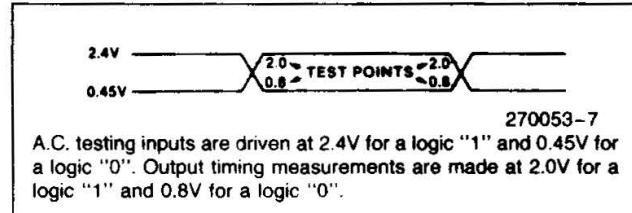

1

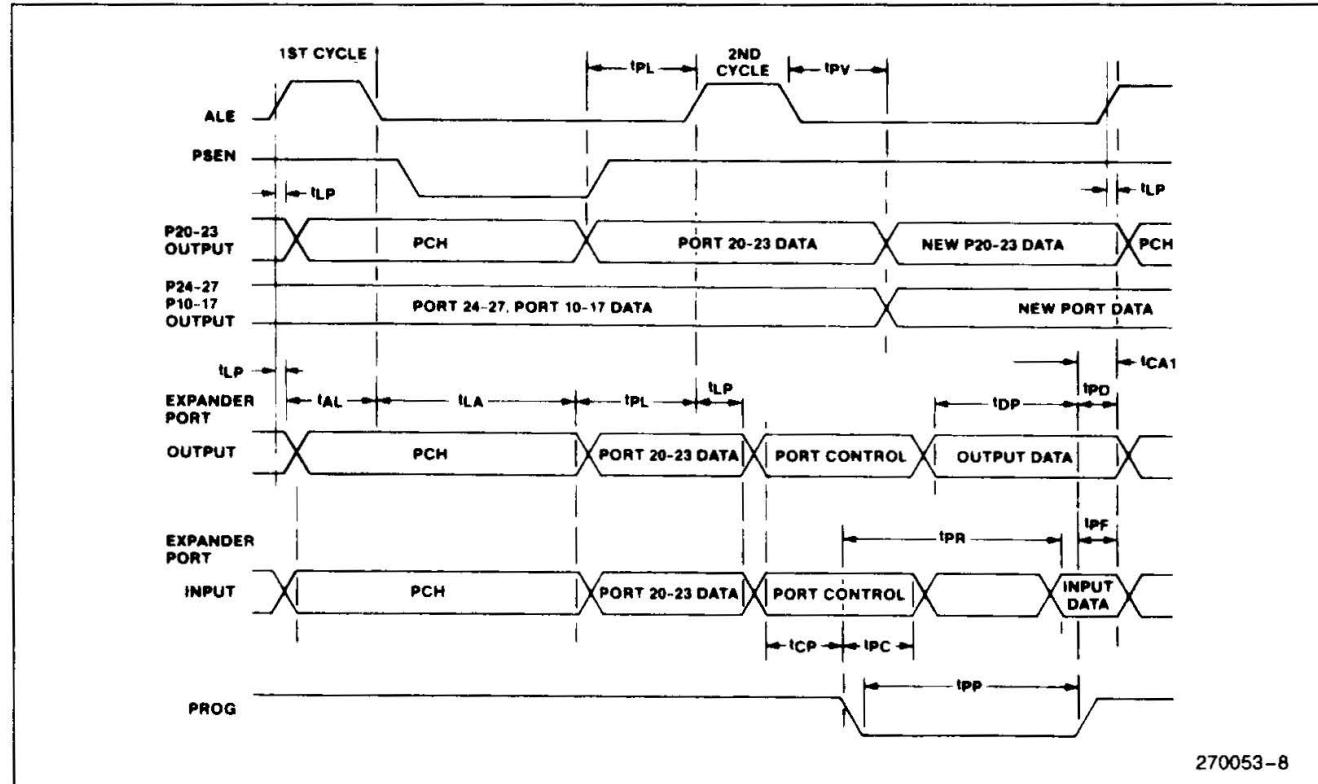

WRITE TO EXTERNAL DATA MEMORY

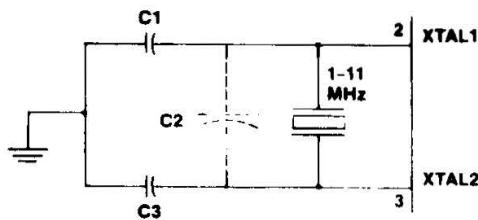

INPUT AND OUTPUT FOR A.C. TESTS

PORT 1/PORT 2 TIMING

CRYSTAL OSCILLATOR MODE

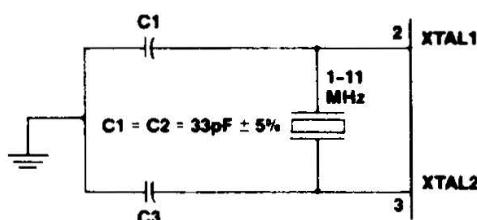

270053-9

 $C_1 = 5 \text{ pF} \pm \frac{1}{2} \text{ pF} + (\text{STRAY} < 5 \text{ pF})$ $C_2 = (\text{CRYSTAL} + \text{STRAY}) < 8 \text{ pF}$ $C_3 = 20 \text{ pF} \pm 1 \text{ pF} + (\text{STRAY} < 5 \text{ pF})$

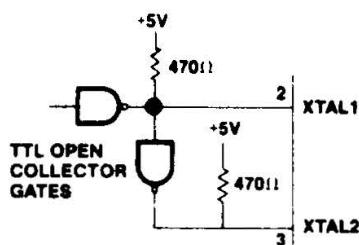

Crystal series resistance should be less than 30Ω at 11 MHz; less than 75Ω at 6 MHz; less than 180Ω at 3.6 MHz.

CERAMIC RESONATOR MODE

270053-10

DRIVING FROM EXTERNAL SOURCE

270053-11

For XTAL1 and XTAL2 define "high" as voltages above 1.6V and "low" as voltages below 1.6V. The duty cycle requirements for externally driving XTAL1 and XTAL2 using the circuits shown above are as follows: XTAL1 must be high 35-65% of the period and XTAL2 must be high 35-65% of the period. Rise and fall times must be faster than 20 ns.

PROGRAMMING AND VERIFYING THE P8749H/48H PROGRAMMABLE ROM

Programming Verification

In brief, the programming process consists of: activating the program mode, applying an address, latching the address, applying data, and applying a programming pulse. Each word is programmed completely before moving on to the next and is followed by a verification step. The following is a list of the pins used for programming and a description of their functions:

Pin	Function
XTAL1	Clock Input (3 to 4.0 MHz)
XTAL2	
RESET	Initialization and Address Latching
T0	Selection of Program or Verifying Mode
EA	Activation of Program/Verify Modes
BUS	Address and Data Input
P20-P22	Data Output During Verify
V _{DD}	Address Input
PROG	Programming Power Supply
	Program Pulse Input

WARNING:

An attempt to program a missocketed P8749H/48H will result in severe damage to the part. An indication of a properly socketed part is the appearance of the ALE clock output. The lack of this clock may be used to disable the programmer.

The Program/Verify sequence is:

1. V_{DD} = 5V, Clock applied or internal oscillator operating, RESET = 0V, T0 = 5V, EA = 5V, BUS and PROG floating. P10 and P11 must be tied to ground.
2. Insert P8749H/48H in programming socket
3. T0 = 0V (select program mode)
4. EA = 18V (activate program mode)
5. Address applied to BUS and P20-22
6. RESET = 5V (latch address)
7. Data applied to BUS
8. V_{DD} = 21V (programming power)
9. PROG = V_{CC} or float followed by one 50 ms pulse to 18V
10. V_{DD} = 5V
11. T0 = 5V (verify mode)
12. Read and verify data on BUS
13. T0 = 0V
14. RESET = 0V and repeat from step 5
15. Programmer should be at conditions of step 1 when P8749H/48H is removed from socket.

1

NOTE:

Once programmed the P8749H/48H cannot be erased.

A.C. TIMING SPECIFICATION FOR PROGRAMMING P8748H/P8749H ONLY

$T_A = 25^\circ\text{C} \pm 5^\circ\text{C}$; $V_{CC} = 5\text{V} \pm 5\%$; $V_{DD} = 21 \pm 0.5\text{V}$

Symbol	Parameter	Min	Max	Unit	Test Conditions
t_{AW}	Address Setup Time to RESET	4tCY			
t_{WA}	Address Hold Time After RESET	4tCY			
t_{DW}	Data in Setup Time to PROG	4tCY			
t_{WD}	Data in Hold Time After PROG	4tCY			
t_{PH}	RESET Hold Time to Verify	4tCY			
t_{VDDW}	V_{DD} Hold Time Before PROG	0	1.0	ms	
t_{VDDH}	V_{DD} Hold Time After PROG	0	1.0	ms	
t_{PW}	Program Pulse Width	50	60	ms	
t_{TW}	T0 Setup Time for Program Mode	4tCY			
t_{WT}	T0 Hold Time After Program Mode	4tCY			
t_{DO}	T0 to Data Out Delay		4tCY		
t_{WW}	RESET Pulse Width to Latch Address	4tCY			
t_r, t_f	V_{DD} and PROG Rise and Fall Times	0.5	100	μs	
t_{CY}	CPU Operation Cycle Time	3.75	5	μs	
t_{RE}	RESET Setup Time before EA	4tCY			

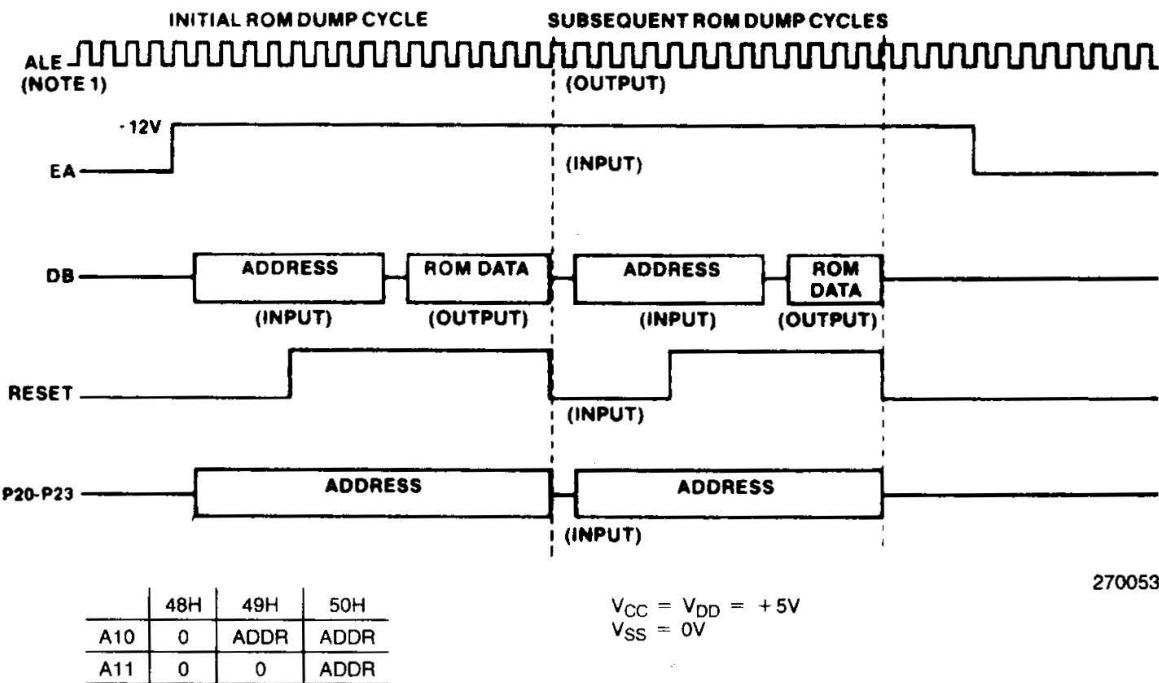

NOTE:

If Test 0 is high, t_{DO} can be triggered by RESET.

D.C. CHARACTERISTICS FOR PROGRAMMING P8748H/P8749H ONLY

$T_A = 25^\circ\text{C} \pm 5^\circ\text{C}$; $V_{CC} = 5\text{V} \pm 5\%$; $V_{DD} = 21 \pm 0.5\text{V}$

Symbol	Parameter	Min	Max	Unit	Test Conditions
V_{DDH}	V_{DD} Program Voltage High Level	20.5	21.5	V	
V_{DDL}	V_{DD} Voltage Low Level	4.75	5.25	V	
V_{PH}	PROG Program Voltage High Level	17.5	18.5	V	
V_{PL}	PROG Voltage Low Level	4.0	V_{CC}	V	
V_{EAH}	EA Program or Verify Voltage High Level	17.5	18.5	V	
I_{DD}	V_{DD} High Voltage Supply Current		20.0	mA	
I_{PROG}	PROG High Voltage Supply Current		1.0	mA	
I_{EA}	EA High Voltage Supply Current		1.0	mA	

SUGGESTED ROM VERIFICATION ALGORITHM FOR ROM DEVICE ONLY

NOTE:
ALE is function of X1, X2 inputs.

COMBINATION PROGRAM/VERIFY MODE (PROGRAMMABLE ROMS ONLY)
